

MPH Harmony

Pleated mosquito net

The special pleated net, which folds into an harmonic shape when closed, is designed to provide space-saving opening. The system, concealed in the side profile, is ideal for installation on terrace doors and balcony niches up to 4 metres wide. The structure of the mosquito net is made of extruded. The construction is made of extruded aluminium, which makes it weather-resistant and can be painted in any RAL colour of your choice. The universal handle allows the mosquito net to be easily used by both children and adults. Pleated mosquito net system is designed to work smoothly with the SLK 45, GK-R, GK-P and UPK 90 roller shutter systems, using the PPMO 53 guide rail PPMO 53 guide bar.

Hinged mosquito net

SP flush mounted roller shutters

Flush-mounted systems are mainly designed for new buildings. However, once the necessary modifications to the lintel are made, these products can also be installed in existing buildings. It is important to plan the use of such solutions, this also applies to the installation method, as early as at the building design stage to allow for the effective use of the product's functional values.

SK front mounted roller shutters

The system is designed mainly for existing buildings. The advantage of roller shutters is that they do not directly integrate with the window, thus requiring interference with the current state of the building. Thanks to this, the decision to install roller shutters in the adaptive system can be made at any time. The Solution, due to the shape of the box, perfectly presents itself especially in an alcove.

SKT top mounted roller shutter

Top mounted roller shutters are characterized by the direct seating of the shutter box on the window frame. These boxes are made of very good quality PVC elements, and their interior has been additionally insulated. It is a very universal and versatile product, allowing installation without built-in, with partial or complete installation.

Colours:

01 – silver
(RAL9006)

02 – white
(RAL9016)

03 – grey
(RAL7038)

05 – beige

Venetian blinds

The structure of the blind system is made of extruded aluminum, ensuring durability and resistance to weathering. Lacquering the visible elements of the blinds in any color from the RAL palette allows you to achieve a visual match with the elements of the facade or window colors. An unquestionable advantage of this solution is the lack of interference with the current state of the building.

Laths C80

Screen roller shutters

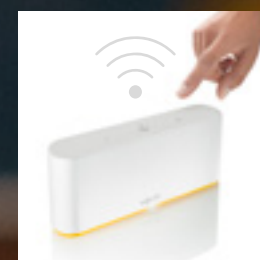

The main advantage of the system is the protection of rooms from intense sunlight, thanks to the use of specialized technical fabrics. These solutions provide an effective optical barrier to light entering the room, minimizing the glare effect that can arise on monitor screens. They also protect our interiors from the gaze of unwanted people, while maintaining good visibility to the outside.

With a properly selected fabric, Screen is a stylish accessory that will give the object a unique character. It is worth remembering that a properly selected system can additionally act as a mosquito net, effectively protecting the premises from the presence of insects.

Manage your home

Smart homes are becoming increasingly popular. Once expensive and extravagant solutions, they are now available to everyone. Smart Home solutions make it possible to control blinds, Venetian blinds, Screen systems and garage doors. By integrating the control of window coverings into a single system, you can open and close them with a single touch.
